

# **WATER AT COASTAL AREA**

**BY**

**DARSIHARJO, M.S., DR.**

**MANAGEMENT RESORT AND LEISURE**

# COAST $\neq$ SHORE

**SHORE LINE:  
MEETING BETWEEN SALINE WATER SURFACE  
AND CONTINENT**

**SHORE:  
SUFFUSED WATER AREA WHEN THE TIDE  
AND DRY WHEN THE EBB**

**COAST:  
AREA DO NOT AFFECT WAVE UNTIL AREA  
WHICH AFFECT MARINE WITH CERTAIN ECOLOGY**

## **FORMULA FOR TIDE TIME ESTIMATE**

$$**T1 = 4/5 Dk + 6**$$

$$**T2 = 4/5 Dk - 6**$$

## **FORMULA FOR EBB TIME ESTIMATE**

$$**E1 = 4/5 Dk**$$

$$**E2 = 4/5 Dk + 12**$$

## **EXAMPLES:**

**WHAT TIME WILL HAPPENED TIDE  
DATE OF 12 RAMADHAN**

**WHAT TIME WILL HAPPENED EBB  
DATE OF 27 SYAWAL**

**WHAT TIME WILL HAPPENED TIDE  
DATE OF 5 RAJAB**

# **ZONE OF COAST AREA**

**METEOROLOGIST:  
SET BREEZE**

**GEOLOGIST:  
AREA OF HEIGHT UNDER 6 METRE**

**OCEANOGRAPHER:  
INFLUENCE TSUNAMI**

**SOCIAL SCIENTIST:  
FISHERMAN JOB**

**Flat**

**Saline water**

**Fresh water**

$$h_s = \frac{f_f}{f_s - f_f} h_f$$

**Interface**

## **EXAMPLE:**

**Well A is on height 10 metre on MSL**

**Water Table depth 6 meter**

**Density fresh water 1,000**

**Density saline water 1,025**

**Question: How many depth interface ?**

**how many well depth to be salin water.**

## **CONTOH:**

**Sumur B terletak pada ketinggian 7 meter dpl**

**Kedalaman Water Table 4 meter**

**Density fresh water 1,000**

**Density saline water 1,040**

**Ditanyakan: Berapa kedalaman interface-nya?**

**Berapa kedalaman sumur agar tidak asin ?**

**Interface**

**d**

# MENGHITUNG KENAIKAN INTERFACE

$$Z = \frac{Q}{2.22/7 \cdot d \cdot K (\Delta f / ff)}$$

## KETERANGAN:

**Z** = Kenaikan Interface

**Q** = Debit pompa

**d** = Jarak antara dasar pompa dengan interface

**K** = Permeabilitas batuan

**$\Delta f$**  =  $f_s - f_f$

# MENGHITUNG DEBIT MAKSIMUM

$$Q_{\max} \leq 22/7 \cdot d^2 \cdot K (\Delta f / ff)$$

## KETERANGAN:

**Q<sub>max</sub>** = Debit maksimum

**d** = Jarak antara dasar pompa dengan interface

**K** = Permeabilitas batuan

**Δ f** = f<sub>s</sub> - f<sub>f</sub>

## DAERAH PANGANDARAN

1. Ketinggian tempat = 10 meter
2. Sumur gali (WT) 6 meter
3. Density F W 1,000
4. Density SW 1,025
5. Dasar sumur kedalamannya 80 meter
6. Permeabilitas batuan 10 meter per hari
7. Debit pompa 4000 m kubik per hari

Berapa kenaikan interface akibat pemompaan tersebut

Berapa debit maksimum yang boleh dieksploitasi ?

Berapa kamar yang boleh dibangun apabila tiap kamar bisa diisi oleh 2 orang dengan kebutuhan air rata-rata 150 liter/hari/orang
