

Attainment of Competency of food production subject matter by inclusive student at  
SMK Pariwisata BPP Bandung

By

Dra. TATI SETIAWATI M.Pd. M.M

The research aim is to get information about how the competency of food production can be attained by inclusive student who study in the class circumstance for normal student. SMK Pariwisata BPP is a Tourism vocational high school is delegated by the national department of education of Jawa Barat Province to edute inclusive student in formal education system. The curriculum is standard curriculum. There are 15 inclusive student in restaurant program in grade X1 2008/2009 academic year who have to follow the learning process the same as the normal student, as a sample of this research. All the teachers take instructional strategies for inclusive class in the process of teaching and helping the inclusive student for learning the same substantial program in each subject mater. Research result found that the inclusive student still have difficulty in attaining the competencies, it show by the score of the test result that they are all in low grade if compare with the normal student. The implication from this information is how to design such a strategies for accommodating inclusive student attain good competencies from the learning process.
